425

Fall events / day so far

60%

View-only visits

What this file records

Each visit writes one `page_view`, then a click when someone hits a link, button, FAQ, or category toggle.

There are no student names, emails, or D2L user IDs — only a random session id and user agent.

Expanding a tile counts as a click even if the student never leaves the page. Production traffic is 12,768 of 12,911 events (99%); the rest is layout prototypes and local testing.

How usage lines up with the academic calendar

Tracking did not exist for most of Winter. It starts 31 March — week 12 of Winter 2026 (classes began 10 January, ended 1 May). Spring Summer is the only complete term in the file. Fall 2026 opened Saturday 29 August; this export covers the first four days, and 1 September is only a morning slice.

Calendar window	Dates	Events	Sessions	Per active day	Coverage
Winter 2026	Jan 10 – May 1	1,373	920	43	Last 32 of 112 days
Break (grades due May 5)	May 2 – May 10	675	475	75	Full 9-day gap
Spring Summer 2026	May 11 – Aug 20	7,440	3,000	73	Full 15-week term
Early summer (SP)	May 11 – Jun 28	2,901	—	—	First session
Late summer (SU)	Jun 29 – Aug 20	4,539	—	—	Second session
Break (Learning Days + SS grades)	Aug 21 – Aug 28	1,723	724	215	Full 8-day gap
Fall 2026	Aug 29 – Dec 20	1,700	796	425	First 4 of ~114 days

Two patterns stand out. The hub gets busier *between* terms than during a typical Winter class week — students come here when registering, checking aid, or finding campus services. Late summer already outpaced early summer (4,539 vs 2,901 events). The pre-Fall week jumped to 215 events/day, and the first Fall class days jumped again to 425/day — about six times the Spring Summer daily rate.

Activity around dated calendar events

Date	Calendar event	Events that day	Events ±1 day
Apr 5	No classes (Winter)	29	90
May 1	End of Winter	58	160
May 5	Winter grades due	79	273

Date	Calendar event	Events that day	Events ±1 day
May 11	Spring Summer classes begin	161	342
May 25	Memorial Day – no classes	40	122
Jun 29	Summer (SU) starts	111	229
Jul 2–5	No classes	172	329
Aug 20	Spring Summer classes end	129	392
Aug 24–26	Fall Learning Days	855	1,285
Aug 25	SS grades due (inside Learning Days)	296	855
Aug 29	Fall classes begin	366	1,063
Aug 31	First full Fall weekday (Monday)	838	—

Timestamps converted to America/Detroit. Calendar events from academic-calendar.json 2026.

Volume over the 22 tracked weeks

Sessions stayed in a narrow band (~150–200/week) through late Winter, rose when Spring Summer opened in mid-May, dipped after Memorial Day, then climbed through July. The break is the week of 24 August (Fall Learning Days through Saturday class start): 984 sessions and 1,258 clicks — more than double any prior week. The week of 31 August is incomplete (Mon–Tue morning only) but already has 423 sessions.

Weekly unique sessions (bar height; week of Aug 24 is the peak at 984)

Fall launch is a different product moment

Monday 31 August is the single largest day in the file: 838 events from 391 sessions. Saturday 29 August (official class start) already had 136 sessions. If Fall holds even half of this daily rate, the hub will see more traffic in one Fall month than in all of tracked Winter. Staffing, content accuracy, and broken-link checks matter most in the 10 days around Learning Days through week one.

What people actually do on the page

Clicks are not all outbound. 60% are expand/collapse on support and resource tiles. Students browse the catalog, then a smaller set follow a “Go to ...” action. That still produced 2,581 trips to other Delta sites.

How the 6,999 clicks split

Median session is a single page view and nothing else. Mean is 2.2 events. 90th percentile is 4 events; the longest session is 54. About 2,365 of 5,911 sessions (40%) interact. Campus Resources tiles are opened nearly twice as often as Direct Support (2,804 vs 1,413 category toggles).

Where outbound clicks go

Advising, Student Self-Service, registration/records, financial aid, online learning, and the library are the core academic pathway. Campus-life links are present but an order of magnitude smaller.

Same destination combined across button labels. Source: 2,581 outbound clicks.

Label vs. URL mismatch on billing

“Go to Tuition & Billing” (94 clicks) and the Tuition & Billing tile (29) both open the registration page (students.delta.edu/records-registration/registration.html), not a billing/payment URL. Those 123 clicks are a large share of the 214 registration hits. Students looking for a bill may be landing on add/drop instructions.

“Go to D2L Help” (96) also points at Online Learning (students.delta.edu/online-learning/index.html), same URL as the Online Learning tile (47). That may be intentional, but D2L-help seekers are mixed into the online-learning count (177).

Other destinations with 15+ outbound clicks

Destination	Clicks	Why it matters
Clubs & organizations	40	Campus engagement, not academics
Writing Center	38	Academic support after advising/tutoring
Campus safety	37	Safety services page
Tutor.com	35	External 24/7 tutoring
Career discovery	34	Jobs/careers path
Health admissions	33	Selective programs
Study abroad	33	Niche but steady interest
Coordinated Care / basic needs	33	Food, aid, wraparound
Campus jobs	29	Student employment
Food pantry	23	Basic-needs demand is real, not noise
Athletics (Pioneers)	22	Student life
Counseling / wellness	21	Lower than advising; still material
Transportation	19	Matches FAQ interest in getting to campus
Honors	19	Small specialized audience
Delta's Closet	15	Basic needs / clothing

FAQ questions students opened

Only 199 FAQ expands, so this is a weak signal — but the ranking matches the outbound list: Self-Service, D2L access, registration timing, finding an advisor, and passwords.

FAQ opened	Expands
How do I access Student Self-Service and MyDelta?	32
How do I access D2L Brightspace?	24
When is course registration?	17
How do I find my advisor?	16
How do I reset my password?	14
What is the Basic Needs / Coordinated Care Network?	11
How can I get transportation help to campus?	9
How do I request disability accommodations?	9
Where can I find semester dates and deadlines?	9
What financial aid options are available?	8

When they visit

Monday is the busiest weekday. Traffic falls through the week, dips on Friday, and stays meaningful on weekends (Sunday outranks Saturday). That weekend load fits a student hub used from home, not only between classes.

Events by weekday (Eastern)

Monday		2,975
Tuesday		2,178
Wednesday		1,929
Thursday		1,992
Friday		1,243
Saturday		1,100
Sunday		1,494

Peak hours (Eastern)

Quietest hour is 5 a.m. (41 events). Peak is 2 p.m. (966), with a plateau from 10 a.m. through 5 p.m. A second bump appears around 8 p.m. (759). Overnight traffic never fully stops.

Window	Events
12–5 a.m.	753
6–8 a.m.	857
9 a.m.–12 p.m.	3,315
1–5 p.m.	4,370
6–8 p.m.	2,053
9–11 p.m.	1,563

How they visit

This is mostly a desktop page inside Brightspace (lab, home computer, or the D2L desktop shell). Mobile is still 21% of events — enough that the catalog layout has to work on a phone, especially in week one of Fall. ChromeOS (~8%) is consistent with college-issued Chromebooks. iOS far outnumbers Android among phones.

Device and OS

Desktop		10,164
Mobile		2,747
Windows		6,422
macOS		2,600
iOS		2,124
ChromeOS		993
Android		618
Linux		154

Browser

Browser	Events	Share
Chrome	6,014	47%
Edge	2,878	22%
Safari	2,588	20%
Other / in-app	602	5%
Firefox	446	3%
Chrome on iOS	196	2%
Opera	179	1%

What the data is telling us

1. The hub is a registration-and-navigation tool more than a “while I’m in class” page. Spikes sit on term boundaries, grades due, Learning Days, and Fall opening — not mid-semester Mondays in April.
2. The primary student journey is Advising → Self-Service → Registration/Aid → D2L/Online Learning → Library. If those five links are wrong, slow, or mislabeled, that is where the pain shows up.
3. Most visits are shallow. Design for scanability: clear tile titles, a working search box, and correct “Go to” URLs beat adding more FAQ copy. Sixty percent never click; they may still have gotten the answer from the tile label.

4. Fall week one is the stress test. 391 sessions on the first Monday is not an anomaly next to Learning Days traffic the week before. Plan content freezes and link QA for the 24 Aug–7 Sep window every year.
5. Basic-needs and access links (food pantry, coordinated care, transportation, password reset, disability FAQ) are small in count and high in importance. They should stay visible, not buried behind the academic tiles that dominate volume.
6. Winter 2026 cannot be compared fairly to Spring Summer or Fall. Only the last month of Winter is in the database. Use Spring Summer 2026 as the baseline term, and treat Fall 2026 as a launch curve until more weeks accumulate.

Methodology and caveats

Session id is created in the browser on page load. A refresh or a new device is a new session, so 5,911 is visits, not unique students. Element text is the first 200 characters of the clicked node, which is why some labels concatenate; destinations were rolled up by URL. Term assignment uses calendar start/end dates inclusive, in Eastern local date of created_at. Events between Winter end (1 May) and Spring start (11 May), and between SS end (20 Aug) and Fall start (29 Aug), are labeled as breaks. 1 September 2026 is truncated at 8:30 a.m. Eastern, so Fall “per day” (425) is pulled up by 29–31 August and will change when a full week exists.
